

WARRANTY INFORMATION: This unit has a lifetime warranty from date of purchase against all defects in materials and workmanship. To report a warranty issue call IVAPE at 858-490-2242.

**WARNING! DO NOT LEAVE UNIT ON UNATTENDED!
DO NOT TOUCH HEATING ELEMENT WHILE UNIT IS ON!
SMOKING IS HAZARDOUS TO YOUR HEALTH.**

1. Plug in unit and place on flat stable surface.
2. Turn knob up to desired level of heat (usually about 2/3 of maximum level). Unit will take approximately 3-4 minutes to reach desired temperature depending on setting.
3. Fill hand piece bowl with desired amount of smoking material. The use of a grinder is recommended.
4. Lightly hold end of hand piece flush against the heating element and inhale. Repeat as needed. When the smoking material has a dry crumbly appearance and no more moisture is seen being drawn through the tubing it's time to reload.
5. If herbs are burning or turning dark brown the unit is too hot, adjust to your needs.

FOR BEST RESULTS:

Vaporizers are devices that heat tobacco and other legal herbs to a point below that of burning. This releases active compounds, oils and moisture without producing the high amount of carbon monoxide and other carcinogens that traditional smoking methods do.
