

THE KIA VAPORIZER

Patent Pending

Online Manual

1. Plug your vaporizer cord into the unit and then into a wall outlet.
2. The red indicator light on The Kia Vaporizer will glow when the unit is on.
3. Allow the unit to warm up for 1 to 3 minutes.
4. The Kia Vaporizer is already set to an optimal temperature of 355°F, therefore the unit is not adjustable.
5. Grind up your herbs.
6. Load the Vaporizer bowl either by dropping a SMALL pinch into the bowl, or by inhaling a SMALL amount using the bowl as a vacuum.
7. Insert only 99% of the glass bowl chamber into the vaporizer to avoid a tight seal and possibly getting stuck.
8. If glass gets stuck, unplug unit and allow to cool, then pull straight back on the glass bowl. DO NOT use a twisting motion or parts may become damaged.
9. Inhale deeply with a steady flow.
10. Stir up the herbs between each inhalation.
11. Repeat until all essential oils are vaporized.
12. KiaVaporizer strongly recommends loading one hit at a time for ultimate taste and experience.
13. Point the bowl into the trash and exhale to discard old herbs.
14. Completely cool down the unit before closing the lid.
